### Listing of Claims

This listing of claims will replace all prior versions and listings of claims in the application:

#### In the claims

Claims 1-36 (Canceled)

37. (Previously presented) An array composition comprising:

a) a substrate with a surface comprising discrete sites at a density of at least 100 sites per  $1 \text{ mm}^2$ , wherein said discrete sites are wells; and

b) a population of microspheres randomly distributed on said sites, wherein said population comprises at least a first and a second subpopulation each comprising a different bioactive agent and do not comprise an optical tag.

38. (Previously presented) An array composition comprising:

a) a substrate with a surface comprising discrete sites at a density of at least 100 sites per  $1 \text{ mm}^2$ , wherein said discrete sites are wells; and

b) a population of microspheres randomly distributed on said sites, wherein said population comprises at least a first and a second subpopulation each comprising a different bioactive agent and wherein each subpopulation further comprises a different identifier binding ligand.

39. (Currently amended) The[[An]] array according to claim [[37 or ]]38, further comprising at least one decoder binding ligand comprising a label.

40. (Currently amended) The[[An]] array composition according to claim 37 or 38, wherein said bioactive agents are nucleic acids.

41. (Currently amended) The[[An]] array composition according to claim 40 wherein said nucleic acids are DNA.

42. (Currently amended) The[[An]] array composition according to claim 40 wherein said nucleic acids are single stranded nucleic acids.

43. (Currently amended) The[[An]] array composition according to claim 40 wherein said nucleic acids are double stranded nucleic acids.

Application Serial No.: 09/189,543

Filing Date: November 10, 1998

44. (Currently amended) The[[An]] array composition according to claim 37 or 38, wherein said bioactive agents are proteins.

45. (Currently amended) The[[An]] array composition according to claim 37 or 38, wherein said substrate is a fiber optic bundle.

46. (Currently amended) The[[An]] array composition according to claim 37 or 38, wherein said substrate is glass.

47. (Currently amended) The[[An]] array composition according to claim 37 or 38, wherein said substrate is plastic.

Claims 48-50. (Canceled)

51. (Previously presented) An array composition comprising:

a) a fiber optic substrate with a surface comprising wells at a density of at least 100 sites per 1 mm<sup>2</sup>; and

b) a population of microspheres randomly distributed in said wells, wherein said population comprises at least a first and a second subpopulation each comprising a different bioactive agent and do not comprise an optical tag.

52. (Previously presented) An array composition comprising:

a) a substrate with a surface comprising discrete sites at a density of at least 100 sites per 1 mm<sup>2</sup>; and

b) a population of microspheres comprising at least a first and a second subpopulation, wherein said first and said second subpopulations each comprise:

i) a different protein bioactive agent; and

ii) a different nucleic acid identifier binding ligand;

wherein said microspheres are randomly distributed on said sites.

53. (Currently amended) The[[An]] array composition according to claim 52, 54 or 55, wherein said substrate is selected from the group consisting of fiber optic bundles, plastic and glass.

54. (Previously presented) An array composition comprising:

a) a fiber optic bundle with a surface comprising discrete wells at a density of at least 100 sites per 1 mm<sup>2</sup>; and

Application Serial No.: 09/189,543

Filing Date: November 10, 1998

b) a population of microspheres comprising at least a first and a second subpopulation, wherein said first and said second subpopulations each comprise:

- i) a different protein bioactive agent; and
- ii) a different nucleic acid identifier binding ligand;

wherein said microspheres are randomly distributed on said sites.

55. (Previously presented) A method of making a composition comprising:

a) forming a substrate with a surface comprising discrete sites at a density of at least 100 sites per 1 mm<sup>2</sup>; and

b) randomly distributing a population of microspheres on said surface such that individual sites contain microspheres, wherein said population comprises at least a first and second subpopulation, wherein said first and second subpopulations each comprise:

- i) a different protein bioactive agent; and
- ii) a different nucleic acid identifier binding ligand;

c) binding a first and second distinct decoder binding ligand to said first and second distinct identifier binding ligand.

56. (Currently amended) The array according to claim 52[[, 54 or 58]] or 54, further comprising at least one decoder binding ligand comprising a label.

57. (Previously presented) The array according to claim 53, further comprising at least one decoder binding ligand comprising a label.

58. (Previously presented) The array composition according to claim 52, 54 or 55, wherein said nucleic acid identifier binding ligands are DNA.

59. (Previously presented) The array composition according to claim 52, 54 or 55, wherein said nucleic acid identifier binding ligands are single stranded nucleic acids.

60. (Previously presented) The array composition according to claim 53 wherein said substrate is a fiber optic bundle.

61. (Currently amended) The[[An]] array composition according to claim 53 wherein said substrate is glass.

62. (Currently amended) The[[An]] array composition according to claim 53 wherein said substrate is plastic.

63. (New) The array according to Claim 58, further comprising at least one decoder binding ligand comprising a label.
